

FOLLOW-UP

A Quick Update to Our Proposal

After digging further into your documentation, we tightened a couple of numbers and sharpened our ask.

Addendum to the DavinTrade × Rise Partnership Proposal — originally sent July 23, 2026

Platform Stats — Refreshed

Two figures moved since our last deck. Everything else about Rise's platform stands as presented.

**Total Disbursed
by Rise**

**Cryptocurrencies
Supported**

190+ countries and 90+ local currencies remain accurate as originally presented.

A Sharper Ask

Two of our five asks are meaningfully clearer, now that we understand your access and webhook process in detail. The other three — webhook secret, batch/rate limits, named contact — are unchanged.

Getting API Access

Previously: Production API credentials — wallet keys and SIWE app registration for the live environment.

Now: Enable our company for B2B API access — both environments. A support request with our company name + RiseID; staging and production are enabled separately.

Webhook Integration

Previously: Confirmation of the webhook payload & signature spec, needed to complete our signed-payload replay testing.

Now: Clarity on webhooks v1 vs. v2 — confirm which we should target, the current event schema, and v1's retirement timeline.

Everything Else Stands

The architecture, the automated pipeline, and the rollout plan in our July 23 deck are unchanged.
Thank you for your patience while we made sure the details matched your latest documentation.
